

ROTATING DISC VALVES

ROTATING DISC VALVES

Long service life with reduced maintenance

ABOUT ROTATING DISC VALVES

The locally designed and manufactured Rotating Disc Valves feature a unique rotating/shearing disc which provides a self-lapping rotation and enhanced seat cleaning action which cuts through solids giving a long-lasting tight shut-off.

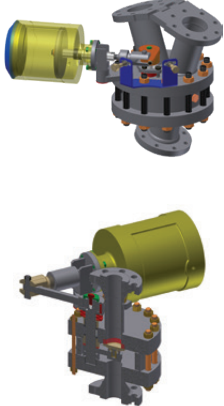

The metal-to-metal seating makes the valves abrasion resistant over a wide temperature range. Their high pressure capability, which is better than industry standards, allows the force to be distributed over a larger area resulting in reduced trim wear.

APPLICATIONS

- Steam
- Coke
- Fly Ash
- Flammable liquids
- Gases
- Sand
- Boiler water
- Abrasive or corrosive media

SUMMARY OF KEY FEATURES AND BENEFITS

Model	Key features	Key benefits
	ROTATING DISC VALVES	Self lapping disc, enhanced seat cleaning action
	Unique rotating shearing disc	Abrasion resistant, wide temperature range
	Metal to metal seating	High pressure capability, better sealing than industry standard
	Wide band seating	Abrasion resistant, no obstruction to flow, minimal pressure drop
	Full port	Increased packing life, wide selection of actuators
	Rotating stem	Reduced chance of jamming due to material entrainment, stagnation and degradation
	Self draining body	Ability to flush valve cavity and internals while in operation
	Body purge connections	Reduced inventory, less maintenance
	Repairable seat	Minimal parts, long service life
Simplicity in design		

VALVE TYPES

- Bulk Material Valves: Designed for pneumatic conveyancing of dry powdery media.
- Single Disc Valves: For applications where pressure and flow can only be from one side and mediums that do not compact.
- Double Disc Valves: For applications where pressure or flow can come from either side or for compacting mediums.
- Diverting Valves: For applications where flow is to be diverted from one line into another.

CONSTRUCTION

- Sizes: 12 mm - 600 mm
- End Connections: Screwed, Flanged, Socket and Butt Weld
- Body Material: Cast Iron / Ductile Iron, Carbon Steel, Stainless Steel, Weldable Alloys
- Packing / Seals: Grafoil or PTFE
- Disc / Seat Material: Stellite #6, Thyrodur
- Basis of Design: Vacuum to 65 mPa, ANSI Classes 150, 300, 600, 900, 1500, 2500
- Temperatures: -200°C to 800°C
- Actuators: Manual Lever, Manual Gear, Pneumatic, Hydraulic and Electric

SELF CLEANING

The openness of the valve body provides space for the product to be freely displaced by the lever arm and disc with each cycle. Fines cannot compact in small open areas and possibly jam components as is the case with other valve concepts.

Each time the valve opens to discharge the product, a vortex is caused by the eccentric body to port configuration. The settled media swirls, thereby cleaning the valve's interior.
